

Current Periodontal Classification: Early Detection, Etiology & Treatment.

COURSE DESCRIPTION

This presentation is designed for dental professionals who are interested in reviewing and updating their periodontal knowledge. The presentation will review periodontal disease immuno-pathogenesis, local and systemic etiologic factors, and classification. It will provide information to assist clinicians to recognize stable periodontium, understand disease progression to provide predictable treatment strategies. Treatment sequence will start with the importance of controlling etiologic factors followed by non-surgical then surgical periodontal therapies. Various types of periodontal surgery will be covered including resective, regenerative, soft tissue grafting and peri-implant disease management.

OBJECTIVES:

- Be familiar with current periodontal classification.
- Recognize local and systemic etiologic factors associated with periodontal disease.
- Be familiar with non-surgical and surgical treatment options.
- Understand regenerative versus resective treatment options.
- Be familiar with treatment options for soft tissue grafting.
- Learn management of peri-implant diseases.

IN PERSON — LECTURE:

Wednesday: March 11, 2026 6:00pm-7:30pm
