

Extraction – Ridge Preservation: Materials & Techniques.

COURSE DESCRIPTION

This presentation focuses on ridge alterations post-extraction and explains rationale for interceptive ridge preservation to minimize alveolar bone loss. Clinical cases will be presented using step by step techniques. These techniques are designed to help establish a healthy foundation for proper dental implant placement. The biologic basis for materials including bone grafts and membranes will be reviewed. Attendees will understand methods to preserve the bone during tooth extractions and how to enhance the soft tissue emergence profile.

OBJECTIVES:

- Understand the consequences of tooth loss and rationale for ridge preservation
- Learn methods to enhance soft tissue emergence profile.
- Select appropriate bone graft and membrane.

IN PERSON — LECTURE:

Tuesday: April 14, 2026 6:00pm-8:00pm

SPEAKER:

Bassam M. Kinaia DDS, MS, DICOI is the Associate Director of the Graduate Periodontology Program at the University of Detroit Mercy in Michigan. He is also the former the Director of the Graduate Periodontology Program at the University of Detroit Mercy in Michigan as well as the Boston University Institute for Dental Research and Education at Boston university in Dubai. Dr. Kinaia is a Diplomate of the American Academy of Periodontology and the International Congress of Oral Implantology.
